

Murali Rayala

Sr Java Backend Engineer · San Francisco Bay Area / Burlingame, CA

murali.rayala@gmail.com · [LinkedIn](#) · [GitHub](#)

SUMMARY

15+ years building high-reliability enterprise platforms, distributed microservices, and AI-assisted products. Available for select engagements.

SKILLS

Java, Spring Boot, Python, Node.js, NestJS, TypeScript, Next.js, JAX-RS, Microservices, REST APIs, PostgreSQL, SQLite, MongoDB, Prisma, AWS, Docker, Kubernetes, Kafka, Jenkins, GitHub Actions.

EXPERIENCE

Independent Product Engineer

Personal product development · Remote · Jun 2026 — Present

Building AI-assisted MVP products while directing architecture, security, testing, product decisions, and end-to-end SDLC workflows.

Backend Engineer

Bank of America · Jul 2023 — Jun 2025

Architected scalable REST APIs for mobile, web, payment, and merchant platforms, strengthening authentication with OAuth2 and Spring Security.

Java Backend Engineer

Visa · May 2022 — Jun 2023

Optimized Visa Tokenization Service processing 15M+ monthly transactions; cut bug-resolution time by 25% and deployment cycles by 50%.

Java Software Engineer

Federal Reserve Bank · Dec 2019 — Feb 2022

Delivered 99.8% identity verification success, 40% fewer security vulnerabilities, 30% faster APIs, and 85% automated test coverage.

Java Software Engineer

Apple · Jul 2018 — Nov 2019

Improved AppleCare Connect warranty sales by 15%, data-processing performance by 25%, and re-architected services for 5,000 concurrent transactions.

Java Software Engineer

U.S. Bank · Sep 2016 — Jun 2018

Built metadata-driven UI generation, REST APIs, KYC workflows, and Drools-based business rules for dynamic compliance configurations.

Application Analyst

Symantec Corporation (HPE) · Oct 2009 — Jul 2016

Supported e-commerce systems processing 50,000+ daily transactions, improved JMS reliability by 98%, and resolved 98% of audit issues.

SELECTED WORK

Gated Community Operations — Community ops for admins, guards, and residents: identity, visitors, maintenance, RBAC, APIs, and Selenium. Optional local LLM for maintenance advice.

ML-IMS — Microbiology lab inventory from sample intake to auditable stock movements (Next.js, Express/TypeScript, Prisma, Docker).

Campaign Ops Platform — GOTV and fundraising APIs with JWT, granular RBAC, and an end-to-end delivery pipeline.
